Batent No. 5877275

GENERAL INFORMATION:
APPLICANT: Arnaout, M. Amin
TITLE OF INVENTION: CONTROLLING CELLULAR IMMUNE/INFLAMMATORY
TITLE OF INVENTION: RESPONSES WITH BETAZ INTEGRINS
NUMBER OF SEQUENCES: 53
CORRESPONDENCE ADDRESS:
ADDRESSEE: Fish & Richardson P.C.
STREET: 225 Franklin Street
CITY: Boston
STATE: MA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                                        A Molecule type: DNA

A Molecule type: DNA

A Molecule type: DNA

A Molecule type: 1-1153 <FLE>

A Molecule type: 1-1153 <FLE>

A Molecule type: 1-1153 <FLE>

A Molecule the last three bases of intron 13, CAG, are included in some but not all mature

A Note: the last three bases of intron 13, CAG, are included in some but not all mature

A Note: sequence extracted from NCBI backbone (NCBIP:121963)

A Molecule sequence of the sequence (NCBIP: A Transout, M.A.

Biochim. Biophys. Acta 874, 368-371, 1986

A Mittle: N-terminal sequence of human leukocyte glycoprotein Mol: conservation across sp.

A Molecule number: A90664; MuID:87076671; PMID:3539202

DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.

WILLARITY: Conclust to the integrin alpha chain family.

SIMILARITY: Contains 7 FG-GAP repeats.

SIMILARITY: Contains 1 VWFA domain.

-!- DOWAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.
-!- SIMILARITY: Belongs to the integrin alpha chain family.
-!- SIMILARITY: Concains 7 FG-GAP repeats.
-!- SIMILARITY: Contains 1 VWFA domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Alternative splicing; Calcium; Cell adhesion;

"Submitted (AUG-1997) to the EMBL/GenBank/DDBJ databases.
--- FUNCTION: Integrin alpha-D/beta-2 is a receptor for ICAM3 and
VCAM1. May play a role in the atherosclerotic process such as
clearing lipoproteins from plaques and in phagocytosis of blood-
borne pathogens, particulate matter, and senescent erythrocytes
from the blood (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

-i- SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-D associates with beta-2 (By similarity).
-i- SUBCELLULAR LOCATION: Type I membrane protein (By similarity).
-i- DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.
-i- SIMILARITY: Belongs to the integrin alpha chain family.
-i- SIMILARITY: Contains 7 FG-GAP repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

May play a role in the atheroselerotic process such as clearing lipoproteins from plaques and in phagocytosis of blood-borne pathogens, particulate matter, and senescent erythrocytes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE=99370002; PubMed=10438935; Van der Vieren M., Crowe D.T., Hoekstra D., Vazeux R., Hoffman P.A., Van der Vieren M., Crowe D.T., Hoekstra D., Vazeux R., Hoffman P.A., Graygon M.H., Bochner B.S., Gallatin W.M., Staunton D.E.; The leukocyte integrin alpha D beta 2 blinds VCAM-1: evidence for a binding interface between I domain and VCAM-1."; J.                                                                                                                                                                                    atheroscierotic plaques, and on splenic red pulp macrophages.
DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins
with I-domains do not undergo protease cleavage.
                                            associates with beta-2.

SUBCELULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: Expressed moderately on myelomonocytic cell
lines and subsets of peripheral blood leukocytes and strongly on
tissue-specialized cells, including macrophages foam cells within
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PROSITE; PS00242; INTEGRIN_ALPHA; 1.

Submitted (DEC-1999) to the EMBL/GenBank/DDBJ databases.
-!-FUNCTION: Integrin alpha-X/Deta-2 is a receptor for fibrinogen. It recognizes the sequence G-P-R in fibrinogen. It mediates call-cell interaction during inflammatory responses. It is especially important in monocyte adhesion and chemotaxis (By similarity).
-!-SUBURIT: Heterodimer of an alpha and a beta subunit. Alpha-X associates with Deta-2 (By similarity).
-!-SUBCELULAR LOCATION: Type I membrane protein (By similarity).
-!-DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.
-!-SIMILARITY: Belongs to the integrin alpha chain family.
                                                                                                                                                                                                                                                                                                                                                         Okazaki N., Kikuno R., Ohara R., Inamoto S., Koseki H., Hiraoka S., Saga Y., Kitamura H., Nakagawa T., Nagase T., Ohara O., Koga H.; Prediction of the Coding Sequences of Mouse Homologues of FLJ Gene: The Complete Nucleotide Sequences of 110 Mouse FLJ-homologous cDNAs Identified by Screening of Terminal sequences of cDNA Clones Randomly Sampled from Size-Fractionared Libraries "; Submitted (FEB-2004) to the EMBL/GenBank/DDBJ databases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 CPQEDSDIAFLIDGSGSIIPHDFRRMKEFVSTVMEQLKKSKTLFSLMQYSEEFRIHFTFK
